Here is the link to my tutorial on how to make the grass item that you can equip on Avatar so that you can turn the red flowers into your own custom grass! -The Flying Unicorn Undisclosed: You know what? Fine, I will tell you! We have the best shop in the land. Not only that, but you have access to every type of item and clothing from every member in the country. [((Gab has a blue star on his head.))] Sophia: Can we open our gold boxes today? Karumbi: No way! [((Gab has a green star on his head.))] Karumbi: Just come to the store and I'll let you open them. Sophia: Yeah, let's go! Anchort: Come on, Gab. Let's open our boxes! [((Gab has a yellow star on his head.))] Karumbi: Okay. Let's get to the store. ~Entering the store~ Undisclosed: Here you go. Enjoy! Karumbi: Here you go. Enjoy! Undisclosed: Here you go. Enjoy! Anchort: Here you go. Enjoy! [((Gab has a purple star on his head.))] Anchort: Here you go. Enjoy! [((Karumbi has a red star on his head.))] Karumbi: Here you go. Enjoy! Sophia: Here you go. Enjoy! ~What Gab bought~ Undisclosed: Here you go. Enjoy! Karumbi: Here you go. Enjoy! Anchort: Here you go. Enjoy! ~What Karumbi bought~ Undisclosed: Here you go. Enjoy! Sophia: Here you go. Enjoy!

description: In this talk we'll talk about how to do data analysis with Haskell, and a few small but fun projects. How do we know if a task takes 2 hours or 3 hours to do, and how do we identify if it is repeatable? How do we get access to large amounts of data? Do we really want to? This is a talk about how to script analysis of data as fast as possible, with less time and effort than it takes to simply do it by hand. Keypoints 1. Data analysis pipelines can be automated and easily re-run. 2. Data analysis pipelines can be shared. 3. Data analysis pipelines can be parameterized. 4. Data analysis pipelines can be written in Haskell. 5. Data analysis pipelines can be written in different languages without having to change anything. 6. Data analysis pipelines are optimized! 7. There is no reason to stop at "manual analysis" when you can do it with a script. Scalable Database Design in Clojure. SWISS MANAGER PACK 4.0.WORK.swn.Windows. Snips: A small free terminal emulator. Free from venture capitalists, advertisers and other nasties. .Snips! The Swiss Database Manager (part of the SwissManager package). Snips is an easy to use graphical SwissDatabase (SQL) manager. You can create, edit and execute simple and complex SQL commands. With the built in editor and support for listing, sorting, searching and filtering data, you can use Snips in a very comfortable way. The program tries to be a free Unix-database manager, but, for no particular reason, it is also compatible with Microsoft Windows, and that makes it the easiest Swiss-database manager there is... .Open Source. No Enterprise Software. Snips is free software. You can use it both for personal and commercial purposes. The Snips website is Web-based Snips.. Snips is available for Microsoft Windows, Linux, BSD, OSX and Web. .A Swiss-Database Manager. is an database manager with a graphical user interface and a built-in editor. Snips is a Swiss-database manager and contains a graphical user interface and a built-in editor with syntax highlighting and support for SQL, PL/SQL, C, C++, Java and Lisp.. Snips is a Swiss-database manager 55cdc1ed1c
